Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-9, drawn to a tape dispensing device including a body member which houses a roll of tape, classified in class 225, subclass 25.
 - II. Claims 10-13, drawn to a tape dispensing device including a base plate which is coupled to a tape dispensing device, classified in class 225, subclass 6.

The inventions are distinct, each from the other because:

- a. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination does not require a base plate which is coupled to a tape dispensing device, since the magnets of the neutralizing device can be attached or coupled to the tape dispensing device by glue or fasteners. The subcombination has separate utility such as use in dispensing flat sheets of paper or labels that does not required a roll of tape to be rolled within a body member. In addition, the subcombination has separate utility such as use in cutting devices that do not dispense a roll of tape.
2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR

1.143).
